DECIDUOUS TREES

Our Shade and Lawn Trees are well grown, transplanted specimens, dug with strong fibrous roots and should not be compared with untransplanted stock offered at lower prices.

We can usually supply larger sizes than those here quoted, for which special prices will be given on request.

Acer platanoides—Norway Maple

THE MAPLES

The Maples supply us with some of the most useful street and shade trees available for general planting. They are comparatively rapid in growth, symmetrical, and free from the ravages of many of the most destructive insect pests.

THE HORSE-CHESTNUTS

Probably the best known of our flowering trees. While young trees are apt to be unsightly, older specimens are usually very symmetrical, and when covered with bloom are of most striking appearance.

<i>Aesculus hippocastanum</i> (Horse Chestnut)		
6 to 8 ft.	2.25	22.50
8 to 10 ft.	3.00	30.00
10 to 12 ft.	4.00	40.00

<i>Aralia spinosa</i> (Hercules Club)		
3 to 4 ft.75	7.50
4 to 5 ft.	1.00	10.00

THE BIRCHES

A well known class of trees remarkable for their white bark and graceful habit of growth.

<i>Betula alba</i> (European White Birch)		
6 to 8 ft.	1.00	10.00
8 to 10 ft.	1.50	15.00
var. <i>pendula laciniata</i> (Cut-leaved Weeping)		
5 to 6 ft.	1.50	15.00
6 to 8 ft.	2.00	20.00
8 to 10 ft.	2.50	25.00
<i>papyrifera</i> (Canoe or Paper Birch)		
6 to 8 ft.	1.25	12.50
8 to 10 ft.	1.75	17.50
<i>Carpinus</i> (Hornbeam)		
<i>Caroliniana</i> (American Hornbeam)

4 to 5 ft.	1.50	15.00	
var. Rubra (Red flowering Dogwood)			
3 to 4 ft.	2.00		

THE HAWTHORNS

Among the flowering trees hardy in this climate, the Hawthorn takes a prominent part. The Common Hawthorn (*C. oxyantha*) is much used for hedges.

Crataegus (Hawthorn)			
Cordata (Washington Thorn)			
3 to 4 ft.75	7.50	50.00
4 to 5 ft.	1.00	10.00	75.00

Oxyacantha (Common Hawthorn)			
2 to 3 ft.50	5.00	
3 to 4 ft.75	7.50	
4 to 5 ft.	1.00	10.00	
var. alba plena (Double-white Hawthorn)			
4 to 5 ft.	1.50	15.00	
5 to 6 ft.	2.50	25.00	
var. Paulii (Paul's Double Scarlet Hawthorn)			
4 to 5 ft.	1.50	15.00	
5 to 6 ft.	2.50	25.00	

THE BEECHES

Slow growing, long-lived trees of striking form and foliage.

	Each	Per Doz.	Per 100
Fagus Americana (American Beech)			
3 to 4 ft.	1.50	15.00	
4 to 5 ft.	2.00	20.00	
Sylvatica (European Beech)

Liriodendron Tulipifera (Tulip Tree)			
5 to 6 ft.	2.00		
6 to 8 ft.	2.50		

Cut-leaved Weeping Birch

Magnolia Stellata

THE MAGNOLIAS

Probably the best known of our flowering trees, blossoming in early spring, and thoroughly hardy in this locality.

Magnolia acuminata (Cucumber Tree)	Each	Per Doz.	Per 100
6 to 8 ft.	2.00	20.00	
Soulangeana (Pink and White)			
3 to 4 ft.	5.00		
4 to 5 ft.	6.00		
stellata (Dwarf White)			
2½ to 3 ft.	5.00		
tripetala (Umbrella Tree)			
6 to 8 ft.	2.00		

THE FLOWERING APPLES

Nothing is more striking than a Flowering Crab Apple in full bloom. Not the least of its attractiveness, however, lies in the red or yellow fruit which loads the branches in the autumn.

Malus (Flowering Apple)			
Angustifolia (Bechtel's Dbl. flg. Crab)			
2 to 3 ft.	1.00		
3 to 4 ft.	1.50		
4 to 5 ft.	2.00		
floribunda atrosanguinea (Single Carmine)			
4 to 5 ft.	1.50		
5 to 6 ft.	2.00		
Neidzwetzkyana (Deep pink; purplish foliage)			
4 to 5 ft.	2.00		
Parkmanii (Halliana) Double pink.			
3 to 4 ft.	1.50		
4 to 5 ft.	1.75		
Morus Tartarica (Russian Mulberry)			
5 to 6 ft.	1.50	15.00	
var. pendula (Tea's Weeping Mulberry)			
2 year heads	3.00	30.00	
3 year heads	4.00	40.00	
Platanus (Plane Tree)			
Acerifolia (Orientalis)			
8 to 10 ft.	1.50	15.00	
10 to 12 ft.	2.00	20.00	

LARGE SPECIMEN SHADE TREES

We can furnish several varieties of shade trees in larger sizes than those catalogued.

PRICES ON APPLICATION.

THE POPLARS

The Poplars supply us with rapid growing trees in forms suitable for street, shade and screening purposes. Probably the best known variety is the Lombardy Poplar used so much for screening unsightly objects. For this purpose it should be set from 4 to 8 feet apart according to the density of screen required.

Populus alba (White or Silver-leaved Poplar)	Each	Per Doz.	Per 100
var. Bolleana (Upright Silver-leaved Poplar)			
8 to 10 ft.	\$1.50	\$15.00	
10 to 12 ft.	2.50	25.00	
12 to 15 ft.	3.00		
15 to 18 ft. (extra heavy)	5.00		
deltoides var. monilifera (Carolina Poplar or Cottonwood)			
8 to 10 ft.	1.50	15.00	75.00
10 to 12 ft., 1¼ to 1½ in.	1.75	17.50	
12 to 15 ft., 1½ to 1¾ in.	2.00	20.00	
15 to 18 ft., 1¾ to 2 in.	3.00	30.00	
nigra fastigiata (Lombardy Poplar)			
6 to 8 ft.	1.00	10.00	75.00
8 to 10 ft.	1.25	12.50	90.00
10 to 12 ft., 1¼ to 1½ in.	1.50	15.00	100.00
12 to 15 ft., 1½ to 1¾ in.	2.00	20.00	120.00
15 to 18 ft., 1¾ to 2 in.	3.00	30.00	150.00

THE OAKS

Long lived trees, free from insect and fungus pests; suitable for shade or street planting. The Pin Oak is one of the best permanent street trees, yet grows almost as rapidly as a Maple.

Quercus	Each	Per Doz.	Per 100
<i>coccinea</i> (Scarlet Oak) 6 to 8 ft.	2.00	20.00	
8 to 10 ft.	2.50	25.00	
<i>palustris</i> (Pin Oak) 6 to 8 ft.	2.00	20.00	150.00
8 to 10 ft.	2.50	25.00	
10 to 12 ft.	3.00	30.00	
<i>rubra</i> (Red Oak) 6 to 8 ft.	2.00	20.00	150.00
8 to 10 ft.	2.50	25.00	

THE WILLOWS

The Willows prefer a damp situation, but are often found growing luxuriantly in comparatively dry soil. They make graceful trees when allowed to develop, but are much used for screening purposes where they stand severe pruning without injury. The Laurel Leaved Willow (*S. pentandra*) is the most valuable plant for coarse hedge purposes.

<i>Salix alba</i> (Common White Willow) 4 to 5 ft. .	.50	5.00
6 to 8 ft.	1.00	10.00
<i>Elegantissima</i> (Thurlo's Willow)		
6 to 8 ft.	1.00	10.00
8 to 10 ft.	2.00	20.00
<i>pentandra</i> (Laurel-leaved Willow) 4 to 5 ft..	.50	5.00
6 to 8 ft.	1.00	10.00
8 to 10 ft.	1.50	15.00
10 to 12 ft.	2.00	20.00
<i>vitellina aurea</i> (Golden-barked Willow)

<i>Europaea</i> (European Linden)		
8 to 10 ft.	2.00	20.00
10 to 12 ft.	2.50	25.00

THE ELMS

Here in New England many towns owe much of their beauty to the stately elms which border their streets. The American Elm is, of course, the best known, but the English Elm (*U. Campestris*) is being much used for street planting. Its foliage is somewhat smaller than that of our native variety and its habit of growth more spreading.

<i>Ulmus Americana</i> (American White Elm)		
8 to 10 ft.	2.00	20.00
10 to 12 ft.	2.50	25.00
12 to 14 ft.	4.00	40.00
<i>campestris</i> (English Elm) 8 to 10 ft.	2.00	20.00
10 to 12 ft.	2.50	25.00
12 to 14 ft.	4.00	40.00
<i>Montana</i> (latifolia) 6 to 8 ft.	1.25	12.00

FLOWERING SHRUBS

When right selections are made, shrubs serve almost as well as evergreens to screen fences and other low, unsightly objects. Even in Winter they are attractive from the gracefulness and color of their stems and branches.

The following list comprises sorts which have been found of value in this climate. Most varieties may be planted with equal success in either Spring or Fall. In general, for massed effects, the dwarf and small-growing shrubs should be set 2½ feet apart; medium and large-growing, 3 to 5 feet apart.

Shrubs for Shady Places: *Berberis*, *Ceanothus*, *Clethra*, *Cornus*, *Euonymus*, *Hamamelis*, *Ilex*, *Ligustrum*, *Lonicra*, *Rhodora*, *Ribes*, *Symphoricarpos*, *Viburnum*, all Evergreen Shrubs.

Shrubs bearing bright-colored berries: *Amelanchier* (Red), *Berberis* (Red), *Cornus* (White), *Eleagnus* (Red), *Euonymus* (Red), *Ilex* (Red), *Ligustrum* (Black), *Lonicra* (Red or Yellow), *Lycium* (Red), *Pyrus* (Red or Black), *Rhamnus* (Black), *Rhodotypos* (Black), *Rosa* (Red), *Sambucus* (Red or Black), *Symphoricarpos* (White or Red), *Viburnum* (Black or Red).

	Each	Per Doz.	Per 100
<i>Amelanchier botryapium</i> (Dwf. Juneberry)

<i>floribunda</i> var. <i>nigra</i> (Black Chokeberry)			
2 to 3 ft.50	5.00	25.00
3 to 4 ft.60	6.00	

THE AZALEAS

The Azalea holds a prominent place among the early spring flowering shrubs. While the European varieties have larger flowers, many of our hardy native sorts are fully as attractive. They prefer rich, fibrous soil protected from the sweep of cold winds in winter, and from full exposure to the sun in summer.

THE FORSYTHIAS

The Forsythias are the earliest of our spring flowering shrubs, blooming in April before the leaves appear. They reach a height of 6 to 8 feet; some are upright and stiff in habit of growth, while others, *F. Suspensa* in particular, are drooping and graceful.

THE HYDRANGEAS

The hardy Hydrangeas are old favorites, and should be included in every shrub collection. They bloom late in the season. The heads of flowers remain until after cold weather sets in. They do well in dry soil; severe pruning is necessary if profusion of bloom is sought.

THE SPIREAS

One of the most valuable classes of hardy shrubs. The best known is, of course, *S. Van Houttei*, which has superseded the old-fashioned Bridal Wreath in popular favor. *S. Arguta* is the earliest to bloom, followed by the feathery leaved *S. Thunbergii*. The dwarf growing *S. Anthony Waterer* blooms during the summer. *S. opulifolia aurea* is a tall rapid growing form with yellow foliage.

THE LILACS

Unless intended for a hedge, the Lilacs should be planted far enough apart so that they can develop naturally, under which conditions, they will bloom profusely from top to bottom. Especial attention should be called to the less common varieties, *S. Josikaea* and *S. Persica*. The former is late blooming, its foliage being plicated and leathery, not subject to dust and mildew as is the case with the Common Lilac. The Persian Lilac is a slender-growing shrub with a tendency to droop, especially when in bloom. Amongst the named hybrids many striking colors will be found.

THE SNOWBALLS

These hardy native shrubs supply us with some of our best planting material. They will grow in partial shade, and will stand exposure to cold winds. The best known are perhaps the Japanese Snowball (*V. plicatum*) and the Bush Cranberry (*V. opulus*), the latter bearing heavy clusters of bright red berries, somewhat resembling those of the Mountain Ash.

The Norway Spruce as a Hedge Plant

HEDGES AND SCREENS

A wide range of choice in hedging materials is possible, and selections should be made with a view to the ultimate height and density desired. For low hedges, which are to be closely sheared, Barberry and Privet are the usual choice, spacing the plants one foot apart. For taller hedges and screens, the Willows, Lilaes, and evergreens of various sorts are frequently used, spacing them three to four feet apart. Many of the flowering shrubs also form most attractive hedges and borders. For a screen of extreme height and rapid growth, the Lombardy Poplar is of course to be recommended. (See page 2.)

Not less than 25 of one variety at the 100-rate; for smaller quantities see "Deciduous Shrubs" in foregoing pages.

PLANT WHITE PINE FOR HEDGES AND WIND-BREAKS

The value of our native White Pine for Hedges, Screens and Wind Breaks is too often overlooked. It is a clean, hardy evergreen of quick growth, and will stand almost any amount of pruning. Young plants set one foot apart and kept trimmed will form a compact evergreen hedge. Just the thing for enclosing the clothes-yard, or for a division line between suburban estates. It makes a splendid back-ground for the perennial border. As a wind-break or screen it has no equal.

18 to 24 in. at \$25 per 100; 2 to 3 ft. at \$50 per 100; 3 to 4 ft. at \$100 per 100.

EVERGREENS

NOTHING approaches in richness a properly arranged mass-planting of hardy evergreens. Many striking combinations of color, height, and varied foliage are possible; best of all, they are as effective in winter as in summer.

We carry many other varieties that are worthy of use in this locality; but the following are what we would recommend as most reliable for general planting.

THE FIRS

Abies balsamea. The "Fir Balsam" of the woods. Tall, slender growth, with dark, shining foliage, silvery underneath. Will thrive in cold, wet ground as well as in higher situations.	Each	Per Doz.	Per 100

NATIVE RHODODENDRONS

We strongly recommend the use of our native Rhododendrons. They are hardy, free flowering, and will survive our rigorous New England winters with much less loss than hybrid sorts heretofore so largely imported. Our source of supply is such that we can fill orders for any quantity of any size in bushy, well furnished plants. Favorable quotations can be made on carload lots delivered to any point in New England.

Rhododendron Carolinianum . A native of the high altitudes of the Southern Appalachian region, and one of the finest of all broad-leaved evergreens. Of compact habit, growing from three to five feet tall, and about the same in diameter; foliage glossy, dark green, flowers pale rose to deep pink.	Each	Per Doz.	Per 100

Rhododendron Catawbiense . This is also a native of the Allegheny Mountains, and is extremely hardy in New England. The plant forms a compact well-shaped clump, growing from four to six feet in height. The rich green foliage and large trusses of pink to bright red flowers, makes it one of the most desirable broad-leaved evergreens.	Each	Per Doz.

ROSES OUT-OF-DOORS

ROSE-GROWING is becoming more and more popular with flower-lovers, especially since the introduction of the wealth of new varieties which have been developed during the last decade, suitable for out-of-door culture in our rigorous climate. The best of the new, together with many of the old favorites are included in the carefully revised lists to be found in the following pages. The varieties are grouped according to the uses for which they are best fitted. Every sunny corner of the home grounds may well be occupied by some type of rose; it will surely respond liberally to even ordinary attention.

Most varieties can be supplied either dormant or in pots, the latter being intended for late spring and mid-summer planting.

CULTURAL NOTES

Roses grown primarily for perfection of bloom, as is usually the case, require a warm and sunny, yet well ventilated situation, with rich soil and plenty of water at regular intervals. Proximity to overhanging trees or buildings should be avoided, as well as exposure to sweeping winds. The soil is best prepared to a depth of two feet or more, placing a layer of stones and gravel at the bottom of such an excavation for drainage, then filling in successively with sods and well-rotted manure, finishing to the level of the ground with rich, friable loam. Roses are gross feeders, but preparation as outlined will make for vigorous growth for several seasons.

Dormant roses should be planted early in the spring, although a few of the hardier sorts will bear fall planting. After May first, only pot-grown plants can be relied upon for thrifty growth; they have an active root-system established, and may be set out in the open ground at any time during the summer. Many of the best roses are "budded,"—that is, the flowering wood is grafted or budded to a wild root-stock, and this bud or graft, which is readily distinguished, should always be set a couple of inches below the surface of the ground. If given an opportunity, the wild root will send up a coarse, prickly "sucker" which will eventually sap the strength of the less robust flowering wood. Two to three feet apart is the proper spacing when planting a rose-bed, the distance depending upon the size of the plants, and the habit of growth of the variety in hand.

Thorough cultivation of the rose-bed is advisable, the purpose of this being not only to prevent the growth of weeds, but to conserve the moisture about the roots of the plants. Plenty of water should be applied during dry periods.

Of the injurious insects which attack the roses the green fly or aphid, appearing early in the season, is the most persistent. A "contact" spray, which kills by caustic action, is necessary, and we recommend Nico-Fume Liquid in a soap solution for this purpose. Various other preparations of like nature are obtainable. Insects which eat the leaves, such as caterpillars, worms, and slugs, require a poisonous spray for their extermination; Hellebore or Arsenate of Lead are effective, though the latter discolours the foliage to some extent.

Mildew, which frequently appears on the leaves and stems especially in cold, damp weather, may be controlled by a spray of one ounce of sulphide of potassium, dissolved in eight ounces of soft soap and three gallons of water. Dusting with powdered sulphur is also effective.

Cut-flower roses, excepting perhaps the Hybrid Perpetuals, need winter protection in latitudes north of Philadelphia. This may be provided by a heavy mulching of coarse manure, straw or leaves; evergreen boughs are often helpful in holding the other material in place, besides being a protection in themselves. Individual plants may be wrapped in straw or straw and burlap. Banking of earth to a height of a foot or more may be recommended as a most effective prevention of injury from cold, especially if covered well with manure after the ground first freezes. Climbing roses are usually sufficiently hardy to stand a normal winter; but when planted in exposed locations it is safer to bend the tops down to the ground and cover them with soil and litter. Before covering, the tops may be cut back somewhat, so that the material may be more easily applied. Of course, this should be followed in the spring by the regular pruning.

Roses grown for cut-flowers should be severely pruned. The result will be not only better flowers, but prolonged life to the plant. Hybrid Perpetuals and Hybrid Teas should be pruned as early in the spring as weather will permit. Thin out the weak shoots and side growth and cut back the main wood to from four to eight "eyes," leaving about one-third of the previous year's growth. Weak-growing varieties can be cut nearly to the ground and they will produce excellent flowers in June. Dwarf or Bedding roses require only the dead and weaker branches to be removed, pruning the tips back lightly. Climbing roses should not be pruned severely. Cut out the coarse, heavy wood over two years old; the remaining wood should not be pruned back until after flowering, as the blooms come on last year's growth.

GERMAN IRIS

The German Iris is among the most desirable and easiest grown of our Spring-flowering hardy plants, producing in May showy flowers of exquisite coloring, combining the richest and most delicate tints. For best results plant in a well-drained, sunny position, barely covering the roots.

In the following description "S" signifies the standards, or erect petals; "F" the falls, or drooping petals.

Paeony "Due de Wellington"

PAEONIES

Paeonies should be planted in rich, deep moist soil, after which they will require less attention than any other class of flowering plants. They are perfectly hardy and their remarkable freedom from disease and insects makes them most desirable. Paeonies thrive in all locations whether in the broad sunlight or partial shade.

LEXINGTON-GROWN GLADIOLI

AMONG the annual and bulbous plants valuable for garden culture, the Gladiolus is becoming increasingly popular. It is useful for bordering and for massing, and blooms late in the season when bright flowers are becoming scarce; for cut-flower purposes it is unsurpassed. The simplicity of its cultural requirements is not its least important qualification. To those unfamiliar with the recent developments in Gladioli, the wonderful coloring and free, open blooms of the newer varieties will be a revelation.

We wish to renew our invitation to our friends to visit our grounds during the blooming season, in August and September, and enjoy the expanse and variety of bloom that only an immense planting makes possible. Upon request, we will send notice of the period of best bloom.

CULTURAL DIRECTIONS

Gladioli require much the same soil conditions as do potatoes, rich, yet porous, soils giving best results. Stable manure may be used for fertilizer; but commercial phosphate, sheep manure, or a mixture of ground bone and wood-ashes is good, the last-named being especially valuable.

Bulbs may be planted as early as the ground has dried out in spring, and plantings may continue at intervals until early July if succession of bloom is sought. Time of bloom varies from sixty-five to ninety days after planting. Set the bulbs right-side up, five or six inches deep and three to six inches apart, selecting a situation where sunlight and moisture will be plentiful. Frequent cultivation should be given during the growing season.

In the Fall, after the leaves turn brown, the bulbs should be lifted and the stalks cut off, after which they should be stored in a cool place where frost will not reach them. When they have dried, the adhering fibrous roots and shriveled "spent" corm should be torn off.

Bulbs at the single or dozen rate sent postpaid to any address.

PRIMULINUS HYBRIDS

THIS new and beautiful race of Gladiolus has been produced by using the fine yellow species "Primulinus," or "Maid of the Mist," in crossing with the older existing strains. The hybrids resulting are distinguished mainly for their fine and varying shades of yellow, graceful slender stems, and airily poised and hooded flowers.

No other race of gladiolus contains such varied and beautiful tints.

DAHLIAS

THESE old-fashioned flowers have always been in favor on account of their bright colors, and their freedom of bloom under unfavorable conditions. Late developments have added such beauty and gracefulness that they are more than worthy of the increasing interest in their cultivation which is now apparent.

Their extreme variation in form and color has resulted in an almost endless assortment of named Dahlias; but careful selection reduces to a comparatively small number the sorts that are of recognized value for garden cultivation, and it is of such sorts that our collection is comprised. Type of flower is indicated after name of each.

Not less than six of one variety at the dozen rate.

FLOWERING CANNAS

OUR collection comprises many of Wintzer's greatest creations in giant orchid-flowered Cannas, all of which have won the highest awards at the world's most notable exhibitions. These new and improved forms of Cannas must be seen to be appreciated. Their brilliancy of color, perfect flower-spikes, and free blooming qualities combine to make them the most popular of flowering plants for lawn decoration. Our Canna fields, when in bloom, always attract much favorable comment.

Cannas thrive in any good garden soil, made rich with well-rotted stable dressing. Best results are obtained by starting the roots indoors during March or April, the plants being set out after the weather is settled and the ground warm, usually in May or June. When planting dormant roots, do not set too deep. The eye should show a little above the ground when done. Set them about 18 inches apart each way. Water sparingly the first two weeks after planting; when growing freely, water liberally. We do not furnish dormant roots after April 1st, but have a full stock of growing plants in pots ready for setting as soon as weather conditions are favorable. By setting these pot-grown plants, one secures a much longer flowering period than when dormant roots are planted. Cannas continue to bloom freely until the frost cuts them down in the late autumn, after which the roots should be lifted and stored in a dry place free from frost.

"BLOEMGAARD"

It is like a picturesque stage setting, this cottage of plaster with thatched roof and pergola, inviting to a cup of tea. The oaken half door with the "peep-hole" leads to a room so quaintly Dutch that visitors are delighted. Of course the floor is of wide red brick and the fire place built high into the chimney. There are pieces of genuine Delft here and there and built into a snug corner of the wall a two story bed. One may have tea in the niche by the window, by a cozy fire or be served out of doors under the trees, but whichever place is chosen the atmosphere is one of real charm. In June tulips, daffodils, peonies and iris fill the borders with exquisite color, while early autumn is made beautiful by thousands of gladioli planted in sweeping curves around the sunny waters of the pond. Not only is "Bloemgaard" unusual but it affords visitors an opportunity of deciding upon desirable effects for their own estates and selecting choice varieties of bulbs for importations.

THE AMERICAN ROSE SOCIETY was organized in 1899 "to increase general interest in the cultivation and to improve the standard of excellence of **THE ROSE FOR ALL THE PEOPLE.**" It holds several annual national exhibitions, at which prizes are awarded for the best Roses.

It encourages local exhibitions, and has affiliated with it many Rose societies. It supervises five Rose test-gardens—in Hartford, Ithaca, Minneapolis, Washington, and Portland. All new Roses of value are registered with it, and its Medals are highly prized as an evidence of especial merit. It fosters the hybridization of new Roses for America. Its membership includes interested rose growers and amateurs all over America.

Most of all, it issues only for its members **THE AMERICAN ROSE ANNUAL**, the authoritative record of American Rose progress, which is needed by every Rose-lover in America. Membership at \$3 per annum brings this fine book and other publications of the Society, with tickets to its exhibitions.
